

# Coding Challenge :: Images Search App

- Implement an Interface that allows users to search for images using any FREE images search API such as:
  - Unsplash
  - Flickr
- The results should be updated live as the user type into the search box:
- Each image display some information when hover:
  - Link to author page
  - A button to save the image to the user's favorite page.
    - When click, show a pop up for the user to choose which list to add the image to.
    - If there's no list, allow the user to create a new list
- On the Favorite page:
  - Display all lists with correct images in each list
  - Edit list title & description
  - Click on each image should trigger the download.

## Requirements

- Use any version of Angular
- Use `ngrx/store` for state management
- Use `ngrx/effect` for handling side effects
- Use any CSS preprocessor of your choice
- The project should include a README file
